## **PRESS RELEASE**

Finaval is pleased to announce the acquisition of a 21.33% stake in ATON Green Storage Srl, a company active in the field of innovative solutions for energy storage and energy-management system efficiency.

The transaction forms part of the Group's strategy of diversification and investment in sectors with high technological and industrial potential, with particular attention to areas complementary to shipping and to the energy transition. The investment in ATON Green Storage represents a significant step in Finaval's evolution toward financial and industrial projects with a strong innovative component.

“The entry into ATON Green Storage is fully aligned with our strategic plan,” comments Giuseppe Santarcangelo, Deputy CEO of Finaval. “For years, Finaval has been pursuing a transformation path in which the combination of financial expertise, technical know-how and targeted investments represents a key asset. ATON is a dynamic, technologically advanced, and forward-looking company, characteristics that make it an ideal partner for expanding our portfolio of investments in rapidly evolving sectors. We are closely evaluating several opportunities in the energy-transition and high-tech services sectors, which we believe are complementary to maritime transport and fully aligned with our industrial vision.”

### **Notes to editors**

#### **About Finaval**

Finaval is an innovative international shipping company with more than thirty years of distinguished experience in the transport of crude oil and refined products. In recent years, it has also operated as a highly specialized financial partner in financial transactions, corporate analysis and advisory, and mezzanine & equity finance.

The Group's consolidated know-how enables investments in companies and initiatives related to the transport and maritime-services sectors, characterized by strong potential for growth and development.

#### **About ATON Green Storage Srl**

ATON Green Storage is an Italian innovative SME specialized in the engineering and production of energy-storage systems for photovoltaic installations (Battery Energy Storage Systems), entirely designed and manufactured in Italy. Founded in 2014, the company is one of the leading national players in the residential and industrial energy-storage sector, supported by an in-house engineering team with extensive experience in energy engineering.

ATON systems—modular, intelligent, and highly efficient—enable the optimization of self-consumption, reduction of energy costs, and support the sustainable use of renewable energy, contributing to the transition toward a more modern and competitive energy model.
